acf/compatibility

- Description
- Changelog
- Parameters
- Compatibilities
- Example
    - functions.php

Description

Used to enable backwards compatibility support for changed functionality.

Support for each compatibility can be enabled by its own filter. Compatibilities are disabled by default and can be opted-in using the `__return_true()` function.

Changelog

- Added in version 5.2.0

Parameters

```
apply_filters( "acf/compatibility/{$name}", $enabled );
```

- `$enabled` *(bool)* Whether of not backwards compatibility support is enabled. Defaults to `false`.

Compatibilities

The following table lists the available compatibilities which can be enabled.

Name	Added	Description
`field_wrapper_class`	5.2.0	Field class names changed in v5.2.0 from `field_type-{$type}` to `acf-field-{$type}`. This change was introduced to better optimise JS performance.

Example

This example demonstrates how to enable backwards-compatibility for field class names.

functions.php

```
add_filter('acf/compatibility/field_wrapper_class', '__return_true');
```
