    - functions.php

Description

Filters the text displayed for each post in the Post Object field.

Changelog

- Added in version 4.1.2

Parameters

```
apply_filters( 'acf/fields/post_object/result', $text, $post, $field, $post_id );
```

- `$text` *(string)* The text displayed for this post (the post title).
- `$post` *(WP_Post)* The post object.
- `$field` *(array)* The field array containing all settings.
- `$post_id` *(int|string)* The current post ID being edited.

Modifers

This filter provides modifiers to target specific fields. The following filter names are available:

- `acf/fields/post_object/result` Applies to all fields.
- `acf/fields/post_object/result/name={$name}` Applies to all fields of a specific name.
- `acf/fields/post_object/result/key={$key}` Applies to all fields of a specific key.

Example

This example demonstrates how to append the post type to each result.

functions.php

```
<?php
add_filter('acf/fields/post_object/result', 'my_acf_fields_post_object_result', 10, 4);
function my_acf_fields_post_object_result( $text, $post, $field, $post_id ) {
    $text .= ' (' . $post->post_type .  ')';
    return $text;
}
```
