acf/fields/user/result

- Description
- Parameters
- Modifiers
- Example
  - functions.php

Description

Filters the text displayed for each user.

Parameters

```
apply_filters( 'acf/fields/user/result', $text, $user, $field, $post_id );
```

- `$text` *(string)* The text displayed for this user.
- `$user` *(WP_User)* The user object.
- `$field` *(array)* The field array containing all settings.
- `$post_id` *(WP_Post)* The post ID where the value is saved.

Modifiers

This filter provides modifiers to target specific fields. The following filter names are available:

- `acf/fields/user/result` Applies to all fields.
- `acf/fields/user/result/name={$name}` Applies to all fields of a specific name.
- `acf/fields/user/result/key={$key}` Applies to all fields of a specific key.

Example

This example demonstrates how to return user meta, in this case the user's `preferred_name_field` appended to the standard result.

functions.php

```
<?php
add_filter('acf/fields/user/result/name=subscriber_field_name', 'my_acf_fields_user_result',
10, 4);

function my_acf_fields_user_result( $text, $user, $field, $post_id ) {

    //Retrieve the preferred name field value from user
    $recipient = get_field( 'preferred_name_field', 'user_' . $user->ID );

    $text .= ' (' . $recipient . ')';

    return $text;

}
```
