acf/json/save_file_name

- Description
- Changelog
- Parameters
- Example
  - functions.php

Description

Used to change the filename of files saved by the ACF local JSON feature.

Changelog

- Added in version 6.2.

Parameters

```
apply_filters( 'acf/json/save_file_name', $filename, $post, $load_path );
```

- `$filename` *(string)* The current filename being filtered.
- `$post` *(array)* An array of settings for the field group, post type, taxonomy, or options page being saved.
- `$load_path` *(string)* The path on the server that the JSON file was loaded from.

Example

This example demonstrates how to change the filename of all JSON files to the ACF title.

functions.php

```
<?php

function custom_acf_json_filename( $filename, $post, $load_path ) {
    $filename = str_replace(
        array(
            ' ',
            '_',
        ),
        array(
            '-',
            '-'
        ),
        $post['title']
    );

    $filename = strtolower( $filename ) . '.json';

    return $filename;
}
add_filter( 'acf/json/save_file_name', 'custom_acf_json_filename', 10, 3 );
```
