the_sub_field()

- Description
- Parameters
- Examples
  - Display a value from within a Repeater field.
  - Display a value from within a Flexible Content field.
  - Nested loops

Description

Displays the value of a specific sub field value from a Repeater or Flexible Content field loop.

This function is essentially the same as `echo get_sub_field()`.

Parameters

```
the_sub_field( $selector, [$format_value] );
```

- `$selector` *(string) (Required)* The sub field name or field key.
- `$format_value` *(bool) (Optional)* Whether to apply formatting logic. Defaults to true.

Examples

Display a value from within a Repeater field.

This example shows how to loop through a Repeater field and display a sub field value.

```
<?php if( have_rows('todo') ): ?>
    <ul>
    <?php while ( have_rows('todo') ) : the_row(); ?>
        <li><?php the_sub_field('item'); ?></li>
    <?php endwhile; ?>
    </ul>
<?php else : ?>
    <p>No todos found.</p>
<?php endif; ?>
```

Display a value from within a Flexible Content field.

This example shows how to loop through a Flexible Content field and generate HTML for different layouts.

```
<?php if( have_rows('content') ): ?>
    <?php while( have_rows('content') ): the_row(); ?>
        <?php if( get_row_layout() == 'paragraph' ): ?>
            <?php the_sub_field('paragraph'); ?>
        <?php elseif( get_row_layout() == 'quote' ): ?>
            <blockquote>
                <p><?php the_sub_field('quote'); ?></p>
                <footer>—<?php the_sub_field('author'); ?></footer>
            </blockquote>
        <?php endif; ?>
    <?php endwhile; ?>
<?php endif; ?>
```

Nested loops

This example shows how to loop through a nested Repeater field and display sub field values.

```
<?php

/**
```

```
 * Field Structure:
 *
 * - locations (Repeater)
 *   - title (Text)
 *   - description (Textarea)
 *   - staff_members (Repeater)
 *     - image (Image)
 *     - name (Text)
 */
if( have_rows('locations') ): ?>
    <div class="locations">
    <?php while( have_rows('locations') ): the_row(); ?>
        <div class="location">
            <h3><?php the_sub_field('title'); ?></h3>
            <p><?php the_sub_field('description'); ?></p>
            <?php if( have_rows('staff_members') ): ?>
                <ul class="staff-members">
                <?php while( have_rows('staff_members') ): the_row();
                    $image = get_sub_field('image');
                    ?>
                    <li>
                        <?php echo wp_get_attachment_image( $image['ID'], 'full' ); ?>
                        <h4><?php the_sub_field('name'); ?></h4>
                    </li>
                <?php endwhile; ?>
                </ul>
            <?php endif; ?>
        </div>
    <?php endwhile; ?>
    </div>
<?php endif; ?>
```
