

# compile

All Python source files must successfully compile using all supported Python versions.

“ [!NOTE] The list of supported Python versions is dependent on the version of `ansible-core` that you are using. Make sure you consult the version of the documentation which matches your `ansible-core` version. You can find an overview for this and previous versions in `ansible_core_support_matrix`.

Control node code, including plugins in Ansible Collections, must support the following Python versions:

- 3.14
- 3.13
- 3.12

Code which runs on targets (`modules` and `module_utils`) must support all control node supported Python versions, as well as the additional Python versions supported only on targets:

- 3.14
- 3.13
- 3.12
- 3.11
- 3.10
- 3.9

“ [!NOTE] Ansible Collections can be [configured](#) to support a subset of the target-only Python versions.
