Sanity Tests

The following sanity tests are available as `--test` options for `ansible-test sanity` when testing Ansible Collections. This list is also available using `ansible-test sanity --list-tests --allow-disabled`.

For information on how to run these tests, see `sanity testing guide <testing_sanity>`.

action-plugin-docs ansible-doc changelog compile deprecated-config future-import-boilerplate empty-init ignores import line-endings no-assert no-basestring no-dict-iteritems no-dict-iterkeys no-dict-itervalues no-get-exception no-illegal-filenames no-main-display no-smart-quotes no-unicode-literals pep8 pslint pylint replace-urlopen runtime-metadata shebang shellcheck symlinks update-bundled use-argspec-type-path use-compat-six validate-modules yamllint

Additional tests are available when testing Ansible Core:

ansible-requirements bin-symlinks boilerplate integration-aliases mypy no-unwanted-files obsolete-files package-data pymarkdown release-names required-and-default-attributes test-constraints
