AppTheme

- Access
- Methods
- Usage Examples
  - Access default theme
  - Apply a custom theme

The application theme singleton that provides pre-configured appearance objects for UI components. Use `AppTheme.shared` to access default appearances or call `setUp(theme:)` to apply a custom theme.

Access

```
let theme = AppTheme.shared
```

Methods

Method	Return Type	Description
`setUp(theme: AppThemeProtocol)`	`Void`	Applies a custom theme conforming to `AppThemeProtocol`

Usage Examples

Access default theme

```
import RealtimeKitUI

let theme = AppTheme.shared
let titleAppearance = theme.meetingTitleAppearance
let clockAppearance = theme.clockViewAppearance
```

Apply a custom theme

```
import RealtimeKitUI

class CustomTheme: AppThemeProtocol {
    // Implement required appearance properties
}

let customTheme = CustomTheme()
AppTheme.shared.setUp(theme: customTheme)
```
