Width

- Import
- Usage
- <Width> Props
  - size
  - center

This component can be used to constrain the width of content, such as text or images.

Import

```
import { Width } from "~/components";
```

Usage

```
import { Width } from "~/components";

<Width size="large">This content will take up 75% of the container width</Width>

<Width size="medium">
  This content will take up 50% of the container width
</Width>

<Width size="small">This content will take up 25% of the container width</Width>

<Width size="small" center>
  This content will take up 25% of the container width and be centered
</Width>
```

`<Width>` Props

`size`

required

type: `"large" | "medium" | "small"`

Controls the width of the container:

- `large`: 75% of container width
- `medium`: 50% of container width
- `small`: 25% of container width

`center`

type: `boolean`

Whether to horizontally center the content.
