This page lists new features, enhancements, known issues, and bug fixes for Docker accounts and admin features, including Docker Home, billing, security, and subscriptions.

2026-09-30

Bug fixes and enhancements

- Accounts that already have cloud sandboxes skip Docker Agentic Platform checkout.

2026-09-29

New

- Organization owners can now assign a license to a team. Every member of the team receives the license, including people who join the team later. Each member uses one license per product.
- The Licenses page in Docker Home shows how many licenses are available and whether they are assigned to teams or to individual members.

2026-09-28

Bug fixes and enhancements

- Creating a team in Docker Home opens that team's page.
- The member list CSV includes a **Licenses** column when the organization has at least one active license pool. The column lists each member's assigned licenses.

2026-09-24

New

- You can now subscribe to the Docker Agentic Platform pay-as-you-go plan with an individual account to run agents in cloud sandboxes. Compute is metered by the second

while a sandbox runs.

Bug fixes and enhancements

- The support request form **Legal** topic includes **PII/Sensitive information**, **Service abuse**, and **Trademark takedowns**.

2026-09-14

New

- Organization owners can now export a member list from Docker Home and receive the CSV by email. Docker generates the file asynchronously and emails a download link to the owner.

2026-08-20

New

- Docker Verified Publisher Starter and Growth plans are now available via self-serve. Organizations can apply and subscribe without contacting sales.

2026-08-14

New

- Administrators can now select a product license when inviting a member. Docker assigns the license when the invitee accepts.

2026-07-31

New

- Administrators can now create OIDC connections so GitHub Actions workflows authenticate to Docker with short-lived tokens instead of stored personal or organization access tokens. Available for Docker Team, Docker Business, Docker Hardened Images, and Docker Sponsored Open Source organizations.

2026-06-18

New

- Custom roles now include AI Governance permissions so owners can delegate policy management to other users and teams.

2026-06-02

New

- Administrators can now provision products to organization members with licenses. Licenses were introduced with AI Governance. Owners can assign or revoke them from the Members page, or turn on automatic assignment when a member first uses a supported product.

2026-05-19

New

- You can now purchase Gordon Plus, Max, and Ultra plans for individual accounts from the billing portal in Docker Home.
- Organizations can now purchase DHI Select repositories via self-serve from the billing portal in Docker Home.

2026-05-12

New

- AI Governance is now available. Administrators can purchase licenses through sales, assign them to members, and enforce organization policies for Docker AI products from Docker Home.

2026-03-03

New

- DHI Select is now available as a Docker Hardened Images plan for organizations that need SLA-backed patching and compliance-ready images.

2026-02-18

New

- Administrators can now configure DVP analytics settings for consuming domain and benchmark report allocations in the Admin Console.

2026-02-13

New

- Administrators can now control whether organization members can push content to their personal namespaces on Docker Hub with namespace access control.

- Administrators can now prevent creating public repositories within organization namespaces using the Disable public repositories setting.

2026-01-27

New

- Administrators can now use an allow list with Image Access Management to approve specific repositories that bypass image access controls.

2025-11-04

New

- Owners can now create custom roles and assign them to members and teams.

2025-10-28

New

- Docker Business subscribers can now add Premium Support, with faster response times and 24/7 availability.

2025-10-22

New

- Organizations can now pay by invoice.

2025-10-14

Bug fixes and enhancements

- Docker Home now keeps activity logs for 30 days. Use the Docker Hub API to retrieve older events.

2025-10-07

Bug fixes and enhancements

- Organization management has moved out of Docker Hub. Manage organizations in Docker Home.

2025-06-30

New

- Organization owners can now export Docker Desktop user data from Insights as a CSV file.

2025-06-23

Bug fixes and enhancements

- Organization access tokens now work with Docker Scout.

2025-06-18

New

- Organization owners can now resend invitations in bulk from the Members page.

2025-06-10

Bug fixes and enhancements

- Activity logs now record single sign-on connection changes, and changes to SCIM and just-in-time provisioning.

2025-05-12

New

- You can now connect more than one identity provider to a single sign-on domain. Users choose a provider when they sign in with SSO.

2025-04-30

New

- You can now pay for a subscription with a verified US bank account.

2025-04-22

Bug fixes and enhancements

- Personal access tokens now transfer to the organization owners when you convert a user account into an organization.

2025-04-08

New

- Organization owners can now onboard an organization with guided setup in Docker Home.

2025-04-01

New

- Organization access tokens are now generally available.
- Single sign-on now supports the `dockerSessionMinutes` attribute, so a session can follow the identity provider timeout.
- Administrators can now track whether users comply with Docker Desktop settings policies from Docker Home (Early Access). Compliance status is reported by Docker Desktop version 4.40 and later.

2025-03-12

New

- You can now disconnect a linked Google or GitHub account from Account settings.

2025-03-11

New

- Organization access tokens now include repository scopes and organization management scopes for members, invites, and groups.

2025-02-21

Bug fixes and enhancements

- Organization access tokens now work with Docker Build Cloud and the Docker Hub APIs. Company owners can manage them.

2025-02-11

New

- Docker Home and the Docker Admin Console are now generally available.

2025-01-31

Bug fixes and enhancements

- Docker began collecting VAT for all European countries on March 1, 2025. See Sales tax exemption and VAT.

2025-01-30

New

- Installing Docker Desktop via the PKG installer is now generally available.
- Enforcing sign-in via configuration profiles is now generally available.

2025-01-10

Bug fixes and enhancements

- Activity logs now record when a settings policy is created, updated, deleted, or transferred.

2024-12-10

New

- New Docker subscriptions are now available. For more information, see Docker subscriptions and features and Announcing Upgraded Docker Plans: Simpler, More Value, Better Development and Productivity.

2024-11-18

New

- Administrators can now:
  - Enforce sign-in with configuration profiles (Early Access).
  - Enforce sign-in for more than one organization at a time (Early Access).
  - Deploy Docker Desktop for Mac in bulk with the PKG installer (Early Access).
  - Use Desktop Settings Management via the Docker Admin Console (Early Access).

Bug fixes and enhancements

- Enhanced Container Isolation (ECI) has been improved to:
  - Permit administrators to turn off Docker socket mount restrictions.
  - Support wildcard tags when using the `allowedDerivedImages` setting.

2024-11-11

New

- Personal access tokens (PATs) now support expiration dates.

2024-10-15

New

- Beta: You can now create organization access tokens (OATs) to enhance security for organizations and streamline access management for organizations in the Docker Admin Console.

2024-08-29

New

- Deploying Docker Desktop via the MSI installer is now generally available.
- Two new methods to enforce sign-in (Windows registry key and `.plist` file) are now generally available.

2024-08-24

New

- Administrators can now view organization Insights.

2024-07-17

New

- You can now centrally access and manage Docker products in Docker Home.
