Docker Agentic Platform release notes

- September 14, 2026
- September 1, 2026
- August 28, 2026
- August 27, 2026
- August 26, 2026

This marks the experimental public release of Docker Agentic Platform. Features and behavior may change. To begin, activate your subscription.

- Added a **Kits** catalog with search, kit format badges, Docker Hub details when available, and links to Docker Hub. Selecting **Run** opens the sandbox launcher with the kit selected.
- Added public kit references in the launcher. Both the kit and its base image must be public.
- Added Hermes and Antigravity as curated kits. Hermes uses Anthropic or OpenAI credentials; Antigravity uses a Google credential.
- Updated the launcher with separate credential and GitHub controls. The launcher reuses saved keys and tokens that the kit supports without requiring you to select them again. Optional credentials can be deselected.
- Added an agent prompt and authoring documentation link on **Kits**, and a compact **Recent sandboxes** list on **New**.
- Added custom secrets for services outside the built-in provider list.
- Added platform selection and a **Restart** timer action for accounts with these controls enabled. Resuming a sandbox starts a fresh lifecycle timer.
- Added support for multiple shell tabs and port publishing from the **Connect** panel.
- Added a VS Code install link and Codex CLI support in **Add to your client**.
- Fixed always-applied policies to stay selected in the launcher.
- Improved sandbox quota errors with guidance on stopping or deleting sandboxes to free capacity.
- Updated sandbox creation to show provisioning progress and resume tracking after a page reload.

September 14, 2026

- Added image attachments in Claude Code sandboxes. Paste or drop an image into the terminal to include it in your prompt.

September 1, 2026

- Added options to save and select credentials in the sandbox launcher.

August 28, 2026

- Fixed **Usage & billing** to show the active billing cycle and accrued compute costs for plans that renew mid-month.

August 27, 2026

- Added Groq and xAI credentials under **Secrets** for OpenCode sandboxes.

August 26, 2026

Run agents and tools in isolated cloud sandboxes with Docker Agentic Platform.

The initial release includes:

- Predefined sandbox types for Claude Code, Codex, OpenCode, Copilot, and Gemini CLI
- A terminal for working with your agent or shell
- Pause, resume, and delete controls for sandboxes
- Automatic sandbox stop or deletion after a timer from 1 to 24 hours
- Options to connect and authorize predefined MCP servers or add custom servers by URL
- API keys and tokens saved under **Secrets**, with their values kept outside sandboxes
- Network policies combining read-only kit rules with the read-only **Open** and **Balanced** presets or custom user policies. Deny rules take precedence over allow rules.
- A choice of compute sizes, billed by the second while the sandbox runs
