Docker Offload usage

- Overview metrics
- Filter and export your data
- Activity cards
- Offload sessions

{{< summary-bar feature_name="Docker Offload" >}}

The **Offload activity** page in Docker Home provides visibility into user activity and session metrics for Docker Offload.

To monitor your usage:

1. Sign in to Docker Home.
2. If you have access to multiple organizations, select the organization associated with your Docker Offload subscription.
3. Select **Offload** > **Offload activity**.

Overview metrics

Key metrics at the top of the page summarize your Docker Offload usage:

- **Total duration**: The total time spent in Offload sessions
- **Average duration**: The average time per Offload session
- **Total sessions**: The total number of Offload sessions
- **Unique images used**: The number of distinct container images used across sessions
- **Unique users**: The number of different users in Docker Offload sessions

Filter and export your data

You can filter the Offload activity data by:

- **Period**: Select a preset time period or choose a custom date range
- **Users**: Organization owners and members with analytics permissions can filter by specific users

- **Additional Filters**: Filter by active sessions and session duration.

Export your session data by selecting the **Download CSV** button. The exported file includes:

- Session ID
- Username
- Image
- Started time
- Ended time
- Duration (in seconds)
- Status
- Container count

The CSV export includes data for your selected date range and user filters, letting you download exactly what you're viewing.

Activity cards

The following cards provide insights into your Docker Offload usage:

- **Offload usage**: Shows your usage trends over time and cloud resource consumption patterns.
- **Popular images**: Shows the top 4 most frequently used container images in your Docker Offload sessions. Select the card to see more images.
- **Top Offload users**: Shows the top 4 users by session count and duration. Select the card to see more users.

Offload sessions

A detailed list of Offload sessions appears following the activity cards. The list:

- Starts with any currently active sessions
- Shows session details including start time, duration, images used, and user information
- Can be filtered using the date and user filters described previously
- Displays **Offload sessions** if you have organization-wide analytics permissions, or **My Offload sessions** if viewing only your own data

Select any session to view more details in a side panel.
