Goal

Translate the home page to Spanish.

Prerequisite knowledge

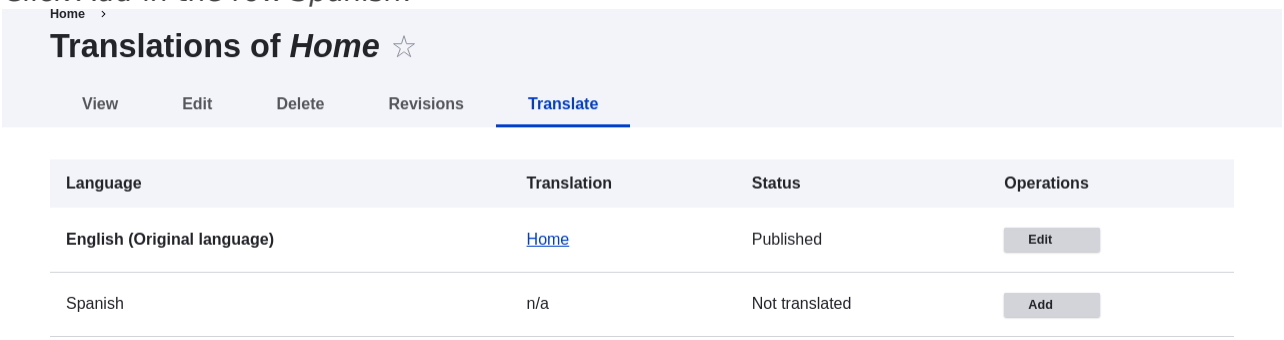
Concept: User Interface, Configuration, and Content translation

Site prerequisites

- The Home content item must exist. See Creating a Content Item.
- The core Content Translation module must be installed, and your site must have at least two languages. See Adding a Language.
- The *Basic page* content type must be configured to be translatable. See Configuring Content Translation.

Steps

1. In the *Manage* administrative menu, navigate to *Content* (*admin/content*).
2. Locate the home page. You can search for it by entering "Home" in the title field.
3. Select *Translate* from the dropdown button in the row of the Home content item. The page *Translations of Home* appears.
4. Click *Add* in the row *Spanish*.



5. Note that the user interface has switched to Spanish. To switch it back to English, remove the first instance of *es* in the browser's URL. For example, if your URL looks like *example.com/es/node/5/translations/add/en/es*, remove the *es* that comes immediately after *example.com*.
6. Fill in the fields as shown below.

Field name	Explanation	Value
Title	Translated title of the page	Página principal
Body	Translated body of the page	
URL alias > URL alias	Translated address of the webpage	pagina-principal

7. Click *Save (this translation)*.
8. Go to your site's home page to view the newly translated page.

Expand your understanding

- Follow the steps above to translate more content on your site.
- Translating Configuration
