Goal

Configure which content item is displayed as the front page of your website.

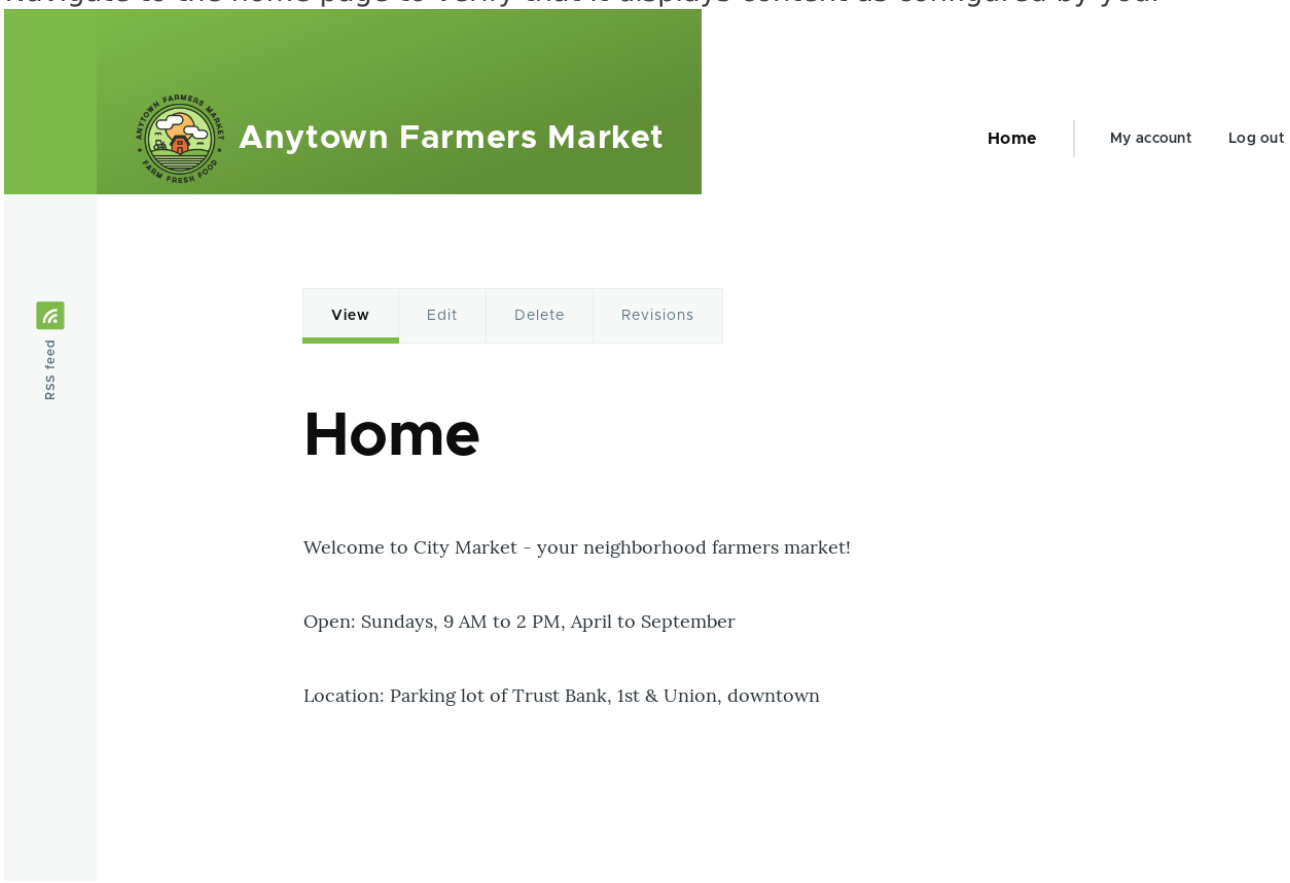
Site prerequisites

The content item that you want to designate as the front page of your site must exist. See Creating a Content Item.

Steps

1. In the *Manage* administrative menu, navigate to *Configuration* > *System* > *Basic site settings* (*admin/config/system/site-information*).
2. Under *Front page*, replace */node* with the name of the page you would like to make the home page. To use the home page that was previously created, provide its path */home*. Click *Save configuration*.

3. Navigate to the home page to verify that it displays content as configured by you.



Expand your understanding

- Adding a Page to the Navigation
- Follow Creating a Content Item to create an error page to be used as a 404 (page not found) or 403 (not authorized) response on your site. Then following the steps here, you can designate it as the error response, in the *Error pages* section of the configuration.
