

Enqueue Theme Styles

- [Hook Details](#)
- [Usage](#)

The theme loads the `theme.min.css` file by default. Developers can override this using a filter hook in a child-theme.

Hook Details

- **Hook Type:** Filter Hook
- **Hook Name:** `hello_elementor_enqueue_theme_style`
- **Default Value:** `true`

The hook controls whether the theme should enqueue the `theme.min.css` stylesheet. By default it's set to `true`, however developers can prevent the theme from enqueueing the file.

Usage

To prevent the theme from loading the `theme.min.css` stylesheet, use the following hook in a child-theme `functions.php` file:

```
add_filter( 'hello_elementor_enqueue_theme_style', '__return_false' );
```
