Shape Dividers

- Hook Details
- Hook Arguments
- Example

Elementor offers the ability to add graphic shape dividers that separate the sections of a page. By default Elementor offers a set of predefined dividers. Additional shape dividers can be added using a dedicated filter hook.

Hook Details

- **Hook Type:** Filter Hook
- **Hook Name:** `elementor/shapes/additional_shapes`
- **Affects:** Editor

Hook Arguments

Argument	Type	Description
`additional_shapes`	*array*	A list of additional shape dividers.

An array of additional shape dividers should include the following parameters:

```
'shape-divider-id' => [
	'title'        => (string) Shape divider label.
	'url'          => (string) Shape divider file URI.
	'path'         => (string) Shape divider file path.
	'has_flip'     => (bool)   Whether to allow to flip the shape vertically. Default is false.
	'height_only'  => (bool)   Whether to allow to set width & height or only height. Default is
false.
```

```
	'has_negative' => (bool)   Whether the shape divider has a negative variation. Default is
	false.
	]
```

To support negative variations, you should include two files:

- `shape.svg`
- `shape-negative.svg`

The first is the original design, the other is the same design but with negative colors.

Example

To add new shape dividers in your theme, use the following code:

```
/**
 * Add additional shape dividers to Elementor.
 *
 * @since 1.0.0
 */
function custom_elementor_shape_dividers() {
	return [
		'shape-divider-1' => [
			'title'        => esc_html__( 'Shape divider 1', 'textdomain' ),
			'url'          => PLUGIN_ASSETS_URL . 'assets/shapes/shape-1.svg',
			'path'         => PLUGIN_ASSETS_PATH . 'assets/shapes/shape-1.svg',
			'height_only'  => true,
		],
		'shape-divider-2' => [
			'title'        => esc_html__( 'Shape divider 2', 'textdomain' ),
			'url'          => PLUGIN_ASSETS_URL . 'assets/shapes/shape-2.svg',
			'path'         => PLUGIN_ASSETS_PATH . 'assets/shapes/shape-2.svg',
			'has_flip'     => true,
			'has_negative' => true,
			'height_only'  => true,
		],
	];
}
add_filter( 'elementor/shapes/additional_shapes', 'custom_elementor_shape_dividers' );
```

To avoid conflicts with other plugins, shape IDs should be prefixed.

The `PLUGIN_ASSETS_URL` should be updated using functions like `plugin_dir_path( __FILE__ )` or `get_stylesheet_directory_uri()`. The `PLUGIN_ASSETS_PATH` should be updated using functions like `plugin_dir_path( __FILE__ )` or `get_stylesheet_directory()`.
