Service Message

- Setting Up & Previewing a Service Message
- Updating a Service Message
- Deleting a Service Message

The service message feature is intended for admins of instances that require their users to consent to some kind of agreement before continuing.

service message example

Setting Up & Previewing a Service Message

- Navigate to `Site Administration`, then click `Service message` on the left
- Add a title and a text, the text field supports markdown formatting
- Click the `Preview` button
- The rendered service message will display like it would be displayed to the users
- Click `Close Preview` and `Save` when ready and the service message will be shown to all logged in users immediately, including you and all users who log in at a later time
- Consent will be saved so the message does not show up again & disagreeing will send the user to logout

Updating a Service Message

You can change the title and the text at any time and click `Save` again to display the updated service message.

Deleting a Service Message

Just hit the `Delete` button to delete.
