

Comment on issues and pull requests via email

“ **NOTE:** This feature is not enabled by default; the `[email.incoming].ENABLED` setting must be set.

When receiving a notification, it is possible to reply to the email instead of using the web interface. The content of the reply will be stripped of the quoted text (lines starting with a greater than `>`) and used as the content of the comment. The attachments from the reply will be added as attachments to the comment.

It will be taken into account when receiving a notification email about:

- A newly created issue
- A newly created pull request
- A comment added to a specific line of code in a pull request review
- A comment on an existing issue
- A comment on an existing pull request

“ **NOTE:** The reply address contains a unique token to match the response with the issue or pull request and looks like this: `forgejo+ABCDE@example.com`. In some mail clients, such as Thunderbird, using this reply address may require using the `Reply List` button rather than the `Reply` button.
