1.5.2.3

GIT v1.5.2.3 Release Notes ==========================

Fixes since v1.5.2.2 --------------------

- Bugfixes
- Version 2 pack index format was introduced in version 1.5.2 to support pack files that has offset that cannot be represented in 32-bit. The runtime code to validate such an index mishandled such an index for an empty pack.
- Commit walkers (most notably, fetch over http protocol) tried to traverse commit objects contained in trees (aka subproject); they shouldn’t.
- A build option NO_R_TO_GCC_LINKER was not explained in Makefile comment correctly.
- Documentation Fixes and Updates
- git-config --regexp was not documented properly.
- git-repack -a was not documented properly.
- git-remote -n was not documented properly.
