1.6.1.3

GIT v1.6.1.3 Release Notes ==========================

Fixes since v1.6.1.2 --------------------

- "git diff --binary | git apply" pipeline did not work well when a binary blob is changed to a symbolic link.
- Some combinations of -b/-w/--ignore-space-at-eol to "git diff" did not work as expected.
- "git grep" did not pass the -I (ignore binary) option when calling out an external grep program.
- "git log" and friends include HEAD to the set of starting points when --all is given. This makes a difference when you are not on any branch.
- "git mv" to move an untracked file to overwrite a tracked contents misbehaved.
- "git merge -s octopus" with many potential merge bases did not work correctly.
- RPM binary package installed the html manpages in a wrong place.

Also includes minor documentation fixes and updates.
