1.6.2.1

GIT v1.6.2.1 Release Notes ==========================

Fixes since v1.6.2 ------------------

- gitignore learned to handle backslash as a quoting mechanism for comment introduction character "#".
- timestamp output in --date=relative mode used to display timestamps that are long time ago in the default mode; it now uses "N years M months ago", and "N years ago".
- git-add -i/-p now works with non-ASCII pathnames.
- "git hash-object -w" did not read from the configuration file from the correct .git directory.
- git-send-email learned to correctly handle multiple Cc: addresses.
