1.6.4.5

Git v1.6.4.5 Release Notes ==========================

Fixes since v1.6.4.4 --------------------

- Simplified base85 implementation.
- An overlong line after ".gitdir: " in a git file caused out of bounds access to an array on the stack.
- "git count-objects" did not handle packs larger than 4G.
- "git rev-parse --parseopt --stop-at-non-option" did not stop at non option when --keep-dashdash was in effect.
- "gitweb" can sometimes be tricked into parrotting a filename argument given in a request without properly quoting.

Other minor fixes and documentation updates are included.
