1.7.0.5

Git v1.7.0.5 Release Notes ==========================

Fixes since v1.7.0.4 --------------------

- "git daemon" failed to compile on platforms without sockaddr_storage type.
- Output from "git rev-list --pretty=oneline" was unparsable when a commit did not have any message, which is abnormal but possible in a repository converted from foreign scm.
- "git stash show <commit-that-is-not-a-stash>" gave an error message that was not so useful. Reworded the message to "<it> is not a stash".
- Python scripts in contrib/ area now start with "#!/usr/bin/env python" to honor user’s PATH.
- "git imap-send" used to mistake any line that begins with "From " as a message separator in format-patch output.
- Smart http server backend failed to report an internal server error and infinitely looped instead after output pipe was closed.

And other minor fixes and documentation updates.
