1.7.10.4

Git v1.7.10.4 Release Notes ==========================

Fixes since v1.7.10.3 ---------------------

- The message file for Swedish translation has been updated a bit.
- A name taken from mailmap was copied into an internal buffer incorrectly and could overrun the buffer if it is too long.
- A malformed commit object that has a header line chomped in the middle could kill git with a NULL pointer dereference.
- An author/committer name that is a single character was mishandled as an invalid name by mistake.
- The progress indicator for a large "git checkout" was sent to stderr even if it is not a terminal.
- "git grep -e ’$pattern’", unlike the case where the patterns are read from a file, did not treat individual lines in the given pattern argument as separate regular expressions as it should.
- When "git rebase" was given a bad commit to replay the history on, its error message did not correctly give the command line argument it had trouble parsing.

Also contains minor fixes and documentation updates.
