1.7.2.2

Git v1.7.2.2 Release Notes ==========================

Fixes since v1.7.2.1 --------------------

- Object transfer over smart http transport deadlocked the client when the remote HTTP server returned a failure, instead of erroring it out.
- git-gui honors custom textconv filters when showing diff and blame;
- git diff --relative=subdir (without the necessary trailing /) did not work well;
- "git diff-files -p --submodule" was recently broken;
- "git checkout -b n ':/token'" did not work;
- "git index-pack" (hence "git fetch/clone/pull/push") enabled the object replacement machinery by mistake (it never should have);

And other minor fixes and documentation updates.
