# 2.20.1

Git v2.20.1 Release Notes ==========

This release is primarily to fix brown-paper-bag breakages in the 2.20.0 release.

Fixes since v2.20 ----------

- A few newly added tests were not portable and caused minority platforms to report false breakages, which have been fixed.
- Portability fix for a recent update to parse-options API.
- "git help -a" did not work well when an overly long alias is defined, which has been corrected.
- A recent update accidentally squelched an error message when the run_command API failed to run a missing command, which has been corrected.
