2.30.3

Git v2.30.2 Release Notes ==========

This release addresses the security issue CVE-2022-24765.

Fixes since v2.30.2 ----------

- Build fix on Windows.
- Fix `GIT_CEILING_DIRECTORIES` with Windows-style root directories.
- CVE-2022-24765: On multi-user machines, Git users might find themselves unexpectedly in a Git worktree, e.g. when another user created a repository in `C:.git`, in a mounted network drive or in a scratch space. Merely having a Git-aware prompt that runs `git status` (or `git diff`) and navigating to a directory which is supposedly not a Git worktree, or opening such a directory in an editor or IDE such as VS Code or Atom, will potentially run commands defined by that other user.

Credit for finding this vulnerability goes to □□□ ; The fix was authored by Johannes Schindelin.
