diff-context-options

`-U<n>`

`--unified=<n>`
Generate diffs with <*n*> lines of context. The number of context lines defaults to `diff.context` or 3 if the configuration variable is unset. (`-U` without `<n>` is silently accepted as a synonym for `-p` due to a historical accident).

`--inter-hunk-context=<n>`
Show the context between diff hunks, up to the specified <*number*> of lines, thereby fusing hunks that are close to each other. Defaults to `diff.interHunkContext` or 0 if the config option is unset.
