pretty

pretty.<name>
Alias for a --pretty= format string, as specified in linkgit:git-log[1]. Any aliases defined here can be used just as the built-in pretty formats could. For example, running `git` `config` `pretty.changelog` `"format:*` `%H` `%s"` would cause the invocation `git` `log` `--pretty=changelog` to be equivalent to running `git` `log` `"--pretty=format:*` `%H` `%s"`. Note that an alias with the same name as a built-in format will be silently ignored.
