{{< admonition type="note" >}}

Starting in Grafana 13, `/api` endpoints are being deprecated in favor of the `/apis` route. Note that while Grafana is working on migrating existing APIs, currently there may not be an exact match to the legacy API you're using.

This change doesn't disrupt or break your current setup. Legacy APIs are not being disabled and remain fully accessible and operative, but `/api` routes will no longer be updated.

To learn more refer to the new API structure in Grafana.
