 - [Usage](#)
 - [Examples](#)
 - [API provider](#)
 - [One icon](#)
-

```
title: 'Iconify for React Function: addIcon'
types:
  IconifyJSON: '../types/iconify-json.md'
  IconifyIcon: '../types/iconify-icon.md'
functions:
  addCollection: './add-collection.md'
```

Iconify for React function: addIcon

This tutorial is part of [Iconify for React functions tutorial](#).

```
include icon-components/functions/add-icon/intro
```

Usage

```
include icon-components/functions/add-icon/props
```

Examples

```
src: icon-components/common/add-icon.js
```

```
include icon-components/functions/add-icon/notes
```

API provider

```
include icon-components/functions/add-icon/provider
```

Example:

```
src: icon-components/common/add-icon2.js
```

Code above adds the following icon:

- `[prop]provider` is `[str]custom`.
- `[prop]prefix` is `[str]md`.
- `[prop]name` is `[str]test`.

In component JSX this icon can be used like this:

```
<Icon icon="@custom:md:test" />
```

```
include icon-components/functions/add-icon/custom
```

One icon

```
include icon-components/functions/add-icon/footer
```
