get-svg-viewbox

- getSVGViewBox() and SVGViewBox type
  - Usage
  - SVGViewBox type
  - Example
  - Convert to string

```
title: getSVGViewBox() and SVGViewBox in Iconify Utils
```

getSVGViewBox() and SVGViewBox type

This function is part of Iconify Utils package.

Function `[func]getSVGViewBox()` is a helper function that parses `[prop]viewBox` attribute value.

Result is represented by `[type]SVGViewBox` type, used in various functions in Iconify Utils.

Usage

The function has the following parameter:

- `[prop]value`, `[type]string`. Attribute value.

Function returns `[type]SVGViewBox` with parsed viewBox value or `[type]undefined` on error.

Function validates numbers to make sure values are valid numbers and there are exactly 4 numbers. On failure, it will return `[type]undefined`.

SVGViewBox type

Type `[type]SVGViewBox` is an array of four numbers:

- x (or left)
- y (or top)
- width
- height

Example

```
src: libraries/utils/get-svg-viewbox.ts
title: 'usage.ts'
extra:
  - src: libraries/utils/get-svg-viewbox.json
    title: 'Result:'
```

Convert to string

To get `[prop]viewBox` attribute as a string from `[type]SVGViewBox`, use `[func]join` function:

```
const value = viewBox.join(' ');
```
