icon-exists

- SVG framework function: iconExists
  - Usage
  - Example

```
title: 'Iconify SVG Framework Function: iconExists'
```

SVG framework function: iconExists

This tutorial is part of Iconify SVG Framework functions tutorial.

```
include icon-components/functions/icon-exists/intro
```

Usage

```
include icon-components/functions/icon-exists/props
```

Example

```
function renderLeftArrow() {
    // Check if 'bi:arrow-left' is available
    if (Iconify.iconExists('bi:arrow-left')) {
        // Return HTML for 'bi:arrow-left'
        return Iconify.renderHTML('bi:arrow-left');
    }
```

```
// Load icon. Bad example because this should use a callback to re-render arrow, but
// this code example is about iconExists(), not loadIcons()
Iconify.loadIcons(['bi:arrow-left']);

// Return '<'
return '&lt;';
}
```
