validate-icon

- validateIconName()
  - Usage
  - Example

```
title: validateIconName() in Iconify Utils
types:
  IconifyIconName: './icon-name.md'
```

validateIconName()

This function is part of Iconify Utils package.

Function `[func]validateIconName()` validates icon name.

Usage

Function has the following parameters:

- `[prop]name`, `[type]IconifyIconName | null`. Icon name.
- `[prop]allowSimpleName`, `[type]boolean`. Optional. If `true`, simple names without provider and prefix are considered valid.

Function returns `[type]boolean` value.

Example

```
src: libraries/utils/validate-icon.ts
title: 'examples.ts'
```
