ARIA: command role

- Description
- Best Practices
- Specifications
- See also

The `command` role defines a widget that performs an action but does not receive input data.

> **NOTE:** The `command` role is an abstract role. It is included here for completeness of documentation. It should not be used by web authors.

Description

A command is form of widget that performs an action but does not receive input data. It is a superclass for the widget roles `button`, `link`, and `menuitem`

Best Practices

Do not use.
