Document: createRange() method

- Syntax
  - Parameters
  - Return value
- Examples
- Notes
- Specifications
- Browser compatibility

The `Document.createRange()` method returns a new Range object whose start and end are offset 0 of the Document object on which it was called.

Syntax

```
createRange()
```

Parameters

None.

Return value

The created Range object.

Examples

```
const range = document.createRange();

range.setStart(startNode, startOffset);
range.setEnd(endNode, endOffset);
```

Notes

Once a `Range` is created, you need to set its boundary points before you can make use of most of its methods.
