- Browser compatibility
- See also

`document.designMode` controls whether the entire document is editable. Valid values are `"on"` and `"off"`. According to the specification, this property is meant to default to `"off"`. Firefox follows this standard. The earlier versions of Chrome and IE default to `"inherit"`. Starting in Chrome 43, the default is `"off"` and `"inherit"` is no longer supported. In IE6-10, the value is capitalized.

Value

A string indicating whether `designMode` is (or should be) set to on or off. Valid values are `on` and `off`.

Examples

Make an iframe's document editable:

```
iframeNode.contentDocument.designMode = "on";
```
