Document: exitPointerLock() method

- Syntax
  - Parameters
  - Return value
- Specifications
- Browser compatibility
- See also

The `exitPointerLock()` method of the Document interface asynchronously releases a pointer lock previously requested through Element.requestPointerLock.

> **NOTE:** While the `exitPointerLock()` method is called on the document, the `requestPointerLock()` method is called on an element.

To track the success or failure of the request, it is necessary to listen for the pointerlockchange and pointerlockerror events.

Syntax

```
exitPointerLock()
```

Parameters

None.

Return value

None (undefined).

Specifications

Browser compatibility
