Node: ownerDocument property

- Value
- Example
- Specifications
- Browser compatibility

The read-only `ownerDocument` property of the Node interface returns the top-level document object of the node.

Value

A Document that is the top-level object in which all the child nodes are created.

If this property is used on a node that is itself a document, the value is `null`.

Example

```
// Given a node "p", get the top-level HTML
// child of the document object

const d = p.ownerDocument;
const html = d.documentElement;
```

Specifications
