Window: cancelIdleCallback() method

- Syntax
  - Parameters
  - Return value
- Examples
- Specifications
- Browser compatibility

The `window.cancelIdleCallback()` method cancels a callback previously scheduled with window.requestIdleCallback().

Syntax

```
cancelIdleCallback(handle)
```

Parameters

- `handle`
  - : The ID value returned by window.requestIdleCallback() when the callback was established.

Return value

None (undefined).

Examples

See our complete example in the article Cooperative Scheduling of Background Tasks API.
