Window: fullScreen property

- Value
- Notes
- Examples
- Browser compatibility

The `fullScreen` property of the `Window` interface indicates whether the window is displayed in fullscreen mode or not.

Value

A boolean value with `true` meaning that the window is in fullscreen mode and `false` meaning it isn't.

Notes

- Switching between regular window and full screen will fire the "resize" event on the corresponding window.

Examples

```
if (window.fullScreen) {
  // it's fullscreen!
} else {
  // not fullscreen!
}
```
