rwmb_end_html

import FieldHTML from '../_parts/_field-html.md';

This filter is similar to rwmb_begin_html and is used to change the ending HTML output of a field.

The ending HTML for a field looks like this:

```
□{$add_clone_button}
□<p id="{$field['id']}-description" class="description">{$field['desc']}</p>
</div><!-- .rwmb-input -->
```

Syntax:

```
apply_filters( 'rwmb_end_html', $end, $field, $value );
```

This filter accepts 3 parameters:

Name	Description
`$end`	The ending HTML output of the field
`$field`	Field settings
`$value`	Field value

This filter has variations:

- `rwmb_end_html`: apply to all fields
- `rwmb_{$field_type}_end_html`: apply to fields with a specific type
- `rwmb_{$field_id}_end_html`: apply to a field with a specific id
