rwmb_html

import FieldHTML from '../_parts/_field-html.md';

This filter is used to change the HTML of the **field input**.

This filter is used to change the **field input HTML**, e.g. the HTML of the inputs to enter data.

The HTML of a field input is various and depends on the field type. For example, a text field outputs an `input` tag, while a wysiwyg field outputs a complex `div`.

```
apply_filters( 'rwmb_html', $html, $field, $value );
```

This filter accepts 3 parameters:

Name	Description
`$html`	HTML output of a field
`$field`	Field settings
`$value`	Field value

This filter has variations:

- `rwmb_html`: apply to all fields
- `rwmb_{$field_type}_html`: apply to fields with a specific type
- `rwmb_{$field_id}_html`: apply to a field with a specific id
