  - Set up Advanced Options
  - Set up Post Types Tab
- Generate Code and Insert It to the Functions.php File

Taxonomy Generator is a free online tool to create custom taxonomy easily and quickly. You can use it without installing Meta Box.

Set up a New Custom Post Taxonomy

Set up General Options

Open this tool here and put the **Plural Name, Singular Name** and **Slug** of your custom taxonomy in the **General** tab. The **Function name** and **Text domain** already have default values, but you can change them as well.

Set up general information of your custom taxonomy created with Meta Box Taxonomy Generator tc

Set up Labels

The **Labels** tab lets you enter the labels of your custom taxonomy that will show up in the Admin Dashboard.

Set up labels of your custom taxonomy created with Meta Box Taxonomy Generator tool

Set up Advanced Options

In the **Advanced tab**, just read the description of each field. They will help you set up some advanced options for your custom taxonomy.

Remember that if you tick the box **Public?**, it can query to take the data of your custom taxonomy so that the content of it can be displayed on the front end.

Set up advanced information of your custom taxonomy created with Meta Box Taxonomy Generator

For more detail about all the fields in this tab, please read this instruction from WordPress.

Set up Post Types Tab

The Post Types tab lists the two default post types **Post** and **Page** here. Just decide whether your custom taxonomy will display in your posts or pages.

In Taxonomy Generator, set up the post type where your custom taxonomy will display

Generate Code and Insert It to the Functions.php File

When you complete all steps above, click the **Generate Code** button. Just wait a moment and the code will show up right under the button.

Meta Box Taxonomy Generator generates code

Copy the code and insert it to the `functions.php` file and it is all done.
