Description

Exit 'Log In As' for Moodle LMS returns you to your own account when you exit a "Log in as" session, instead of logging you out completely. It's useful for developers and anyone doing user support, including managers and administrators.

Installation

1. Download the latest version from: Moodle Marketplace.
2. Unzip it into `auth/` folder in your Moodle LMS site.
3. Be sure that the final name of the directory is: dev, the full path in your Moodle installation will be auth/dev

Important: After installation, you must enable "Exit Log In As" under:

Site administration ▶ Plugins ▶ Authentication ▶ Manage authentication.

There is nothing more to configure.

Screenshots

Enable redirecting users to a specific URL when they log out.
