Development data generator

The development data generator tool replaces the previous tool_generator (admin/tool/generator) in Moodle 2.6. It has also been backported (without removing the old one) to Moodle 2.5 as the current Moodle 2.5 tool_generator is not usable; it is available from 2.5.2+ (Build: 20131004) onwards.

It contains multiple features to help generate data for development or testing purposes.

1. Test course generator
2. Test site generator
3. JMeter test plan generator
