call

Closure::call

Binds and calls the closure

ENTITY

public

mixed

Closure::call

object

newThis

mixed

args

Temporarily binds the closure to `newThis`, and calls it with any given parameters.

ENTITY

`newThis`
The `object` to bind the closure to for the duration of the call.

`args`
Zero or more parameters, which will be given as parameters to the closure.

ENTITY

Returns the return value of the closure.

ENTITY

`Closure::call` example

```
<?php
class Value {
    protected $value;

    public function __construct($value) {
        $this->value = $value;
    }

    public function getValue() {
        return $this->value;
    }
}

$three = new Value(3);
$four = new Value(4);

$closure = function ($delta) { var_dump($this->getValue() + $delta); };
$closure->call($three, 4);
$closure->call($four, 4);
?>
```

ENTITY

```
int(7)
int(8)
```
