# curl-multi-close

curl_multi_close

Remove all cURL handles from a multi handle

ENTITY

void

curl_multi_close

CurlMultiHandle

multi_handle

Removes all `CurlHandle`s attached to the `CurlMultiHandle`, as if `curl_multi_remove_handle` was called for each of them.

Prior to PHP 8.0.0 this function also closed the cURL multi handle resource, making it unusable.
