mb-ereg-replace

mb_ereg_replace

Replace regular expression with multibyte support

ENTITY

string

false

null

mb_ereg_replace

string

pattern

string

replacement

string

string

string

null

options

ENTITY

Scans `string` for matches to `pattern`, then replaces the matched text with `replacement`

ENTITY

`pattern`
The regular expression pattern.

Multibyte characters may be used in `pattern`.

`replacement`
The replacement text.

`string`
The `string` being checked.

`options`
The search option. See `mb_regex_set_options` for explanation.

ENTITY

The resultant `string` on success, or ENTITY on error. If `string` is not valid for the current encoding, ENTITY is returned.

ENTITY

ENTITY	ENTITY
8.0.0	`options` is nullable now.
7.1.0	The function checks whether `string` is valid for the current encoding.
7.1.0	The `e` modifier has been deprecated.
