NULL

□□

- Syntax
- Casting to ENTITY

The `null` type is PHP's unit type, i.e. it has only one value: ENTITY.

Undefined and `unset` variables resolve to the value ENTITY.

Syntax

There is only one value of type `null`, and that is the case-insensitive constant ENTITY.

```
<?php
$var = NULL;
?>
```

Casting to ENTITY

ENTITY

Casting a variable to `null` using `(unset) $var` will *not* remove the variable or unset its value. It will only return a ENTITY value.

ENTITY

`is_null`, `unset`
